Factory Data Capture

Softera.FDC

Softera.FDC (Factory Data Capture) simplifies the material and operation posting on production orders by collecting actual data from shop floor. Companies can benefit from a clearer view of the current situation on the shop floor, such as real-time consumption. It helps to track precise inventory and production progress and the employee time spent on machines.

Enjoy the benefits:

TIMELY

Write-off components where they are consumed. Have real-time inventory level and actual production execution status. Avoid paperwork and the delay caused by entering data to Microsoft Dynamics 365 Business Central. Save time on accounting which allows to focus on other tasks

SIMPLE

Easy to understand - uses only the information that is required. That allows for faster education of new employees and minimizes human errors

RELIABLE

The collected information is reliable, which helps middle-level managers make the right decisions and allows for the evaluation of projects or production orders

COMPATIBLE

The solution is compatible with external products:

Cosmo Consult Advanced Manufacturing pack. Allows to also post work packages

To-Increase Dynamics Anywhere. Allows to use mobile devices on the shop floor

Key features

Softera.FDC allows to:

- Post consumption on production orders without using journals
- Post routing operations on production orders without using output journals
- Postpone posting by letting the responsible person on the shop floor to review, correct entries and post them later
- Work in several manufacturing locations and track the time spent by employees in each of them
- Automatically close employee active sessions based on the shop floor shift times
